

DIVIDED INSULATED CONTAINER

Abstract of the Disclosure

5 A portable soft sided insulated container has an impermeable liner that provides
a liquid holding barrier. The liner is folded from a single monolithic plastic sheet to
reduce or eliminate the need for heat welded seams. The liner seats within the
container and has a releasable attachment around its lip for mating with the rim of the
container. The container has an insulated lid so that the entire assembly may be
closed. The liner can be removed for cleaning, or replacement if punctured. When
10 not in use the entire assembly can be folded into a collapsed position for storage. The
container has two storage chambers that share a common insulated dividing wall.
